SUMMARY

Frontend Engineer with 4+ years architecting production web3, 3D/AR, and real-time Solana systems. Designed a wallet-native auth layer with ed25519 signature challenges, domain-bound nonces, and bounded per-device sessions. Led a wallet-connector rewrite that expanded supported wallets from 8 to 100+, and delivered a play-to-earn marketplace that reached 10,000 users and \$241K+ turnover. Deep hands-on React 19, Next.js 16 App Router, TypeScript strict, Three.js, and server-first data. Fully async across distributed EU teams.

CORE SKILLS

- **React & TypeScript:** React 18/19, Hooks, Server Components, TypeScript, JavaScript (ES2024), Next.js 15/16 App Router, Server Actions, Turbopack
- **State & Data:** Redux Toolkit, Zustand, TanStack Query, TanStack Table, Zod, REST, GraphQL, Drizzle ORM, Mongoose
- **UI, Styling & Motion:** HTML5, CSS3, Tailwind CSS v4, SCSS Modules, shadcn/ui, Radix UI, Material UI, Framer Motion, responsive layouts, WCAG / a11y, Core Web Vitals, Lighthouse
- **3D, Audio & Media:** Three.js, React Three Fiber, Drei, React Spring, @google/model-viewer (GLB/USDZ), Howler
- **Testing & Quality:** Jest, React Testing Library, Bun test, ESLint, Prettier, TypeScript strict
- **Platform, Auth & Delivery:** Clerk, Stripe, JWT (jose), bcrypt, next-intl, Resend, Upstash Redis (rate limit), Docker, Nginx, Vercel, Bun, CI/CD (GitHub Actions), WebSocket / SSE
- **Backend (pragmatic):** Node.js, Express.js, NestJS, MongoDB, PostgreSQL, MySQL, Redis, SQLite
- **Web3 & Solana:** Solana Web3.js, Anchor, SPL Token, Solana Wallet Adapter, Pump.fun (bonding curve, pAMM, Jupiter routing), wallet auth (Solana, WAX, EVM), Ethers.js, NFT marketplaces

PROFESSIONAL EXPERIENCE

Frontend Engineer · Bodega Estudio

December 2024 — January 2026 · Remote

- Designed and shipped a wallet-native auth system on Solana: Sign-In-With-Solana-style signed challenges with domain / origin / host / network binding, Redis-backed single-use nonces, ed25519 signature verification (tweetnacl), and split access/refresh JWT rotation (HS256, 15m / 30d) with bcrypt-hashed refresh tokens and a bounded per-device session model in MongoDB.
- Architected the App Router codebase around feature-sliced domains with strict UI / services / persistence boundaries, enforced by type-strict schemas and Zod validation at every I/O edge.
- Owned an interactive Three.js / R3F pipeline with Drei and React Spring for GLB and USDZ scenes, deterministic loading, timeout fallbacks, and Safari-AR parity — holding a stable frame budget across desktop and mobile.
- Hardened the API surface: host / origin / referer guards, Upstash-based IP rate limiting, CSRF-safe atomic nonce consumption, geo-IP session enrichment, and structured pino logging.
- Built the data and state layer for server-first caching, optimistic mutations, and split transient / durable state between in-memory and document stores.

Frontend Engineer · VGS Co.

October 2022 — July 2024 · Remote

- Replaced a legacy wallet connector with a custom integration, scaling supported wallets from 8 to 100+ across several dApps and contributing to a reported 254% user-base increase.
- Shipped production interfaces for wallet authentication, token operations, payment flows, and NFT marketplace UX.

- Owned build configuration, bundle optimization, CI/CD pipelines, and multi-environment deployments for a small product team.

Full-Stack Developer · SSDC Inc.

July 2021 — April 2022 · Remote

- Built the main website for a WAX play-to-earn project end-to-end: frontend, backend integration, wallet auth, and production deploy.
- Delivered the user-facing platform with React, Wax.js, Anchor Link, Node.js, and Express.js.
- Operated the stack on a VPS with Nginx routing and delivery tuning; scaled to 10,000+ users and \$241,525+ in marketplace turnover.

SELECTED PROJECTS

Long Way Up — web3 3D experience (flagship project)

Stack: Next.js 16 · React 19 · TypeScript · Three.js · React Three Fiber · Drei · Solana Wallet Adapter · MongoDB · Upstash Redis · TanStack Query · Framer Motion · JWT (jose) + bcrypt · Tailwind v4 — [GitHub](#)

Full-stack web3 3D experience: interactive scenes with GLB/USDZ assets, wallet auth with JWT sessions, rate-limited API, and a rich motion-driven UI.

PF-SDK — Pump.fun trading SDK

Stack: TypeScript · Bun · Solana Web3.js · Anchor · SPL Token — [GitHub](#)

SDK for trading Pump.fun tokens — automatic routing across bonding curve, pAMM (PumpSwap), and Jupiter DEX fallback. Slippage protection, priority-fee handling, strict type safety (zero any).

MK-CDT — Solana copy-trading bot

Stack: TypeScript · Bun · Solana Web3.js · Anchor · WebSocket (onLogs) · SQLite · Zod · HTTP + SSE dashboard — [GitHub](#)

Real-time copy-trading bot for Pump.fun: subscribes to a leader wallet via WebSocket, deduplicates signatures, runs a sequential execution queue, and persists trades and positions in SQLite. Live HTTP + Server-Sent Events dashboard for monitoring.

Personal Portfolio

Stack: Next.js 16 · TypeScript · next-intl · Server Actions · Resend · Upstash Redis · SCSS Modules — [GitHub](#) · [Live](#)

Multilingual portfolio in 8 locales with theme persistence, server-side contact form with Resend email delivery, and optional Upstash-based IP rate limiting.

EDUCATION

Kharkiv Technological University IT-STEP

September 2020 — June 2024

Foundation in JavaScript, TypeScript, Python, C++, C#, algorithms, data structures, frontend/backend, databases, software architecture, testing, and DevOps.

LANGUAGES

English — Professional working proficiency · Ukrainian — Native · Russian — Fluent
